Digital Printing - RDJet310

Semiconductor Process R&D Validation Equipment

Technical Specifications

RDJet310

Max. Substrate Size	Max. 310 x 310 (mm)
Max. Substrate Thickness	50 (mm)
Footprint (W x D x H)	< 1300 x 1300 x 1900 (mm)
Weight	< 830 kg
Stage Accuracy	±10 μm (3σ)
Stage Repeatability	± 3 μm
Stage Heating	Max 60 °C Optional 100° C
Stage Rotation	Auto ± 20 degree
Vision System	Drop Watch / Top view
Alignment accuracy	± 10 μm
Alignment Mark	AI Self learning
Ink supply	Glass bottle / 10-50mL Option: industrial ink-supply system
Printing format	Bitmap, TIFF, DXF, PDF
Printing Resolution	300 dpi to 6000 dpi (Min. 4.2 μm space per drop)
Ink Type	Solvent, nanoparticle, aqueous, UV
Ink viscosity	1 - 20 (cps)
Post Process	UV

Monitor and analyze the drop formation and velocity of each jetting nozzle.

Generate drawing patterns from bitmap data with customizable resolution and settings using dedicated drawing data creation software.

Features

- **Simple Plug-and-Play Setup**
Engineered with a single home plug to ensure quick, hassle-free installation and minimal setup.
- **Fully Open System**
Designed with a completely open architecture, enabling maximum flexibility and seamless integration with diverse components and workflows.
- **Excellent System Flexibility**
Highly adaptable to different processes and applications, providing versatile solutions for diverse needs.
- **Minimal Ink Consumption**
Requires less than 50ml of ink for system startup, ensuring cost-effective & efficient operation.
- **Easy to Change Post-Treatment Module**
Simple to replace the curing light module, making maintenance and upgrades quick & easy.
- **Self-Learning Alignment Mark System**
Leverages Manz's advanced optical system for self-learning alignment, eliminating the requirement for pre-marked alignment markers and enhancing process efficiency.
- **Automatic Table Turning Adjustment**
Automatically adjusts the table position to maintain optimal alignment & accuracy.
- **Compact and Space-Saving Design**
The smallest system available, offering a small footprint for space-efficient integration into pilot lines.
